## METHOD AND APPARATUS FOR REMOTE OR COLLABORATIVE CONTROL OF AN IMAGING SYSTEM

## ABSTRACT OF THE DISCLOSURE

A method and apparatus for remote or collaborative control of an imaging system included in an imaging system environment is disclosed herein. The environment provides an alternate user interface at a location where the remote or collaborative control of the imaging system will occur. The alternate user interface is generated by an application model included in or proximate to the imaging system. The application model is in communication with the alternate user interface. The alternate user interface may be located remote or local with respect to the imaging system.
